G40 HALIFAX RULES

The United Kingdom

The British economy is no longer split between London and Calcutta, instead, the United Kingdom collects only one income for all territories owned on the map with London as it's capital. The UK must relinquish all IPCs each time an Axis power captures London, however, the UK may retain all IPC's if Calcutta is captured, as it is no longer a capital city.

The Commonwealth

Commonwealth

All territories with an ANZAC and Canadian roundel on them, as well as South Africa, South West Africa, Newfoundland, and Eire will now be know as the Commonwealth. This new nation will replace ANZAC in the game round sequence, and all British beige starting units on Canadian and South African territories must now be replaced with ANZAC gray pieces (including the sea units in sea zones #106 and #71). This power's starting income will be 20 IPCs, and the United Kingdom's will be 35 IPCs.

Political Situation

The Commonwealth nation is at war with Germany and Italy, and neutral with Japan to start the game, they may not collect national objectives until they are at war with all the Axis powers. The Commonwealth nation does not have a capital, and as long as the Commonwealth controls Ottawa and/or Sydney, they may collect an income and build units. However, if both Ottawa and Sydney are under enemy control, the Commonwealth must immediately relinquish all IPCs to the bank, and remove their roundel from the income tracker until at least 1 of these two original victory cities are liberated.

Map Board Adjustments

If you are using a G40 2nd Edition map you must put a commonwealth roundel on Western Canada, as well as South Africa, South West Africa, Newfoundland, and Eire.

National Objectives

All national objectives for the United Kingdom and ANZAC have been removed, and are now replaced with the following:

United Kingdom:

5 IPCs if the United States are at war with the Axis powers
5 IPCs if the Allies control Gibraltar, Egypt, India, and Malaya
5 IPCs if there are no Axis Submarines in the Atlantic (any sea zone west of Denmark and Gibraltar straits including #128 and #127)

Commonwealth:

5 IPCs if the Commonwealth controls all their original territories
5 IPCs if the Allies (not including Dutch) control Borneo, Sumatra, Java, and Celebes
5 IPCs if the Commonwealth has at least 1 land unit on an original German territory
